SITE PLAN
SCALE 1:500

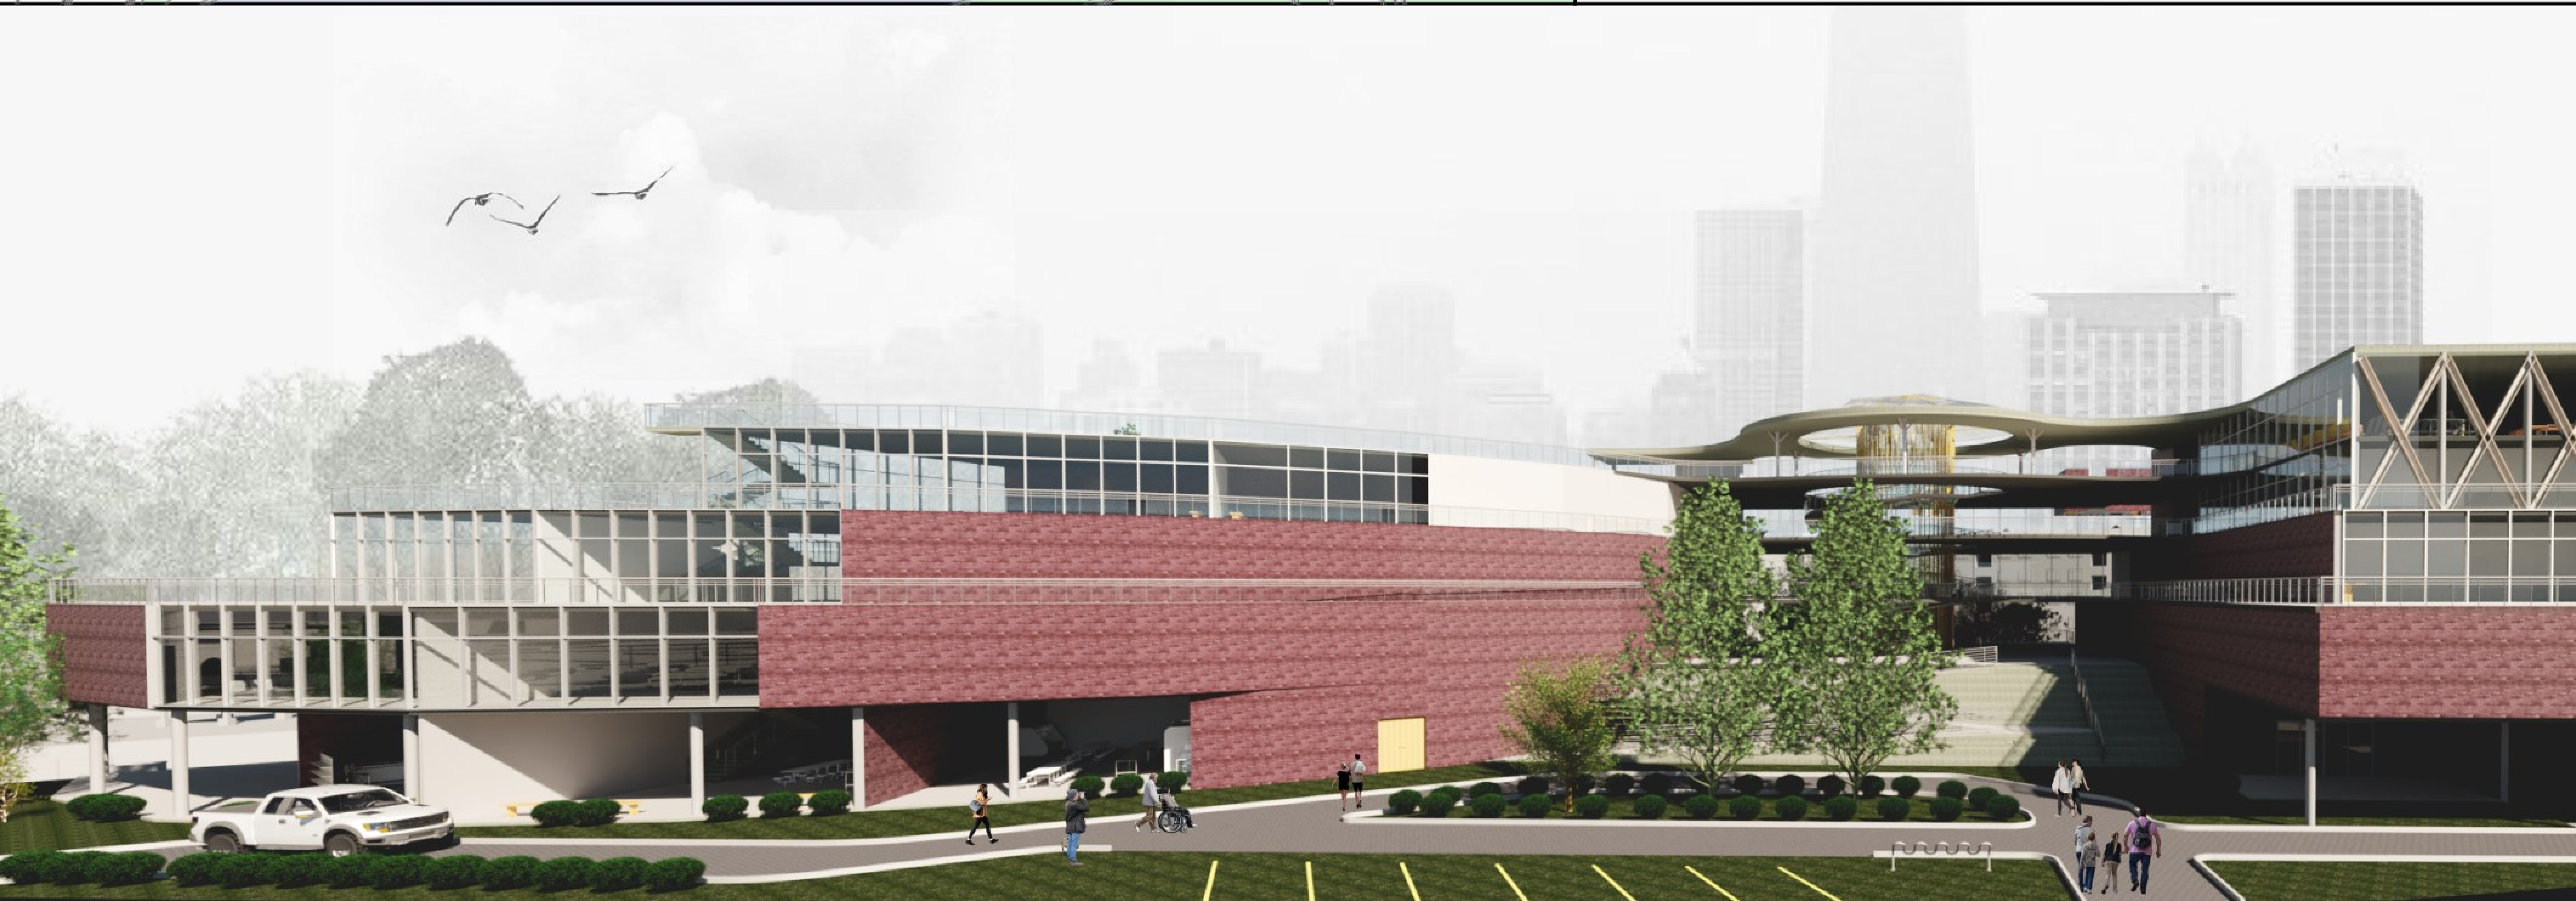

Design intentions:

- A platform to socialize & connect people
- To create a hotspot in the town both for the tourists and locals
- Preserve heritage, history & culture
- A platform to give people the experience of cultural values and festivities
- To create job opportunities for local people
- To create a welcoming hub to connect the locals and tourists

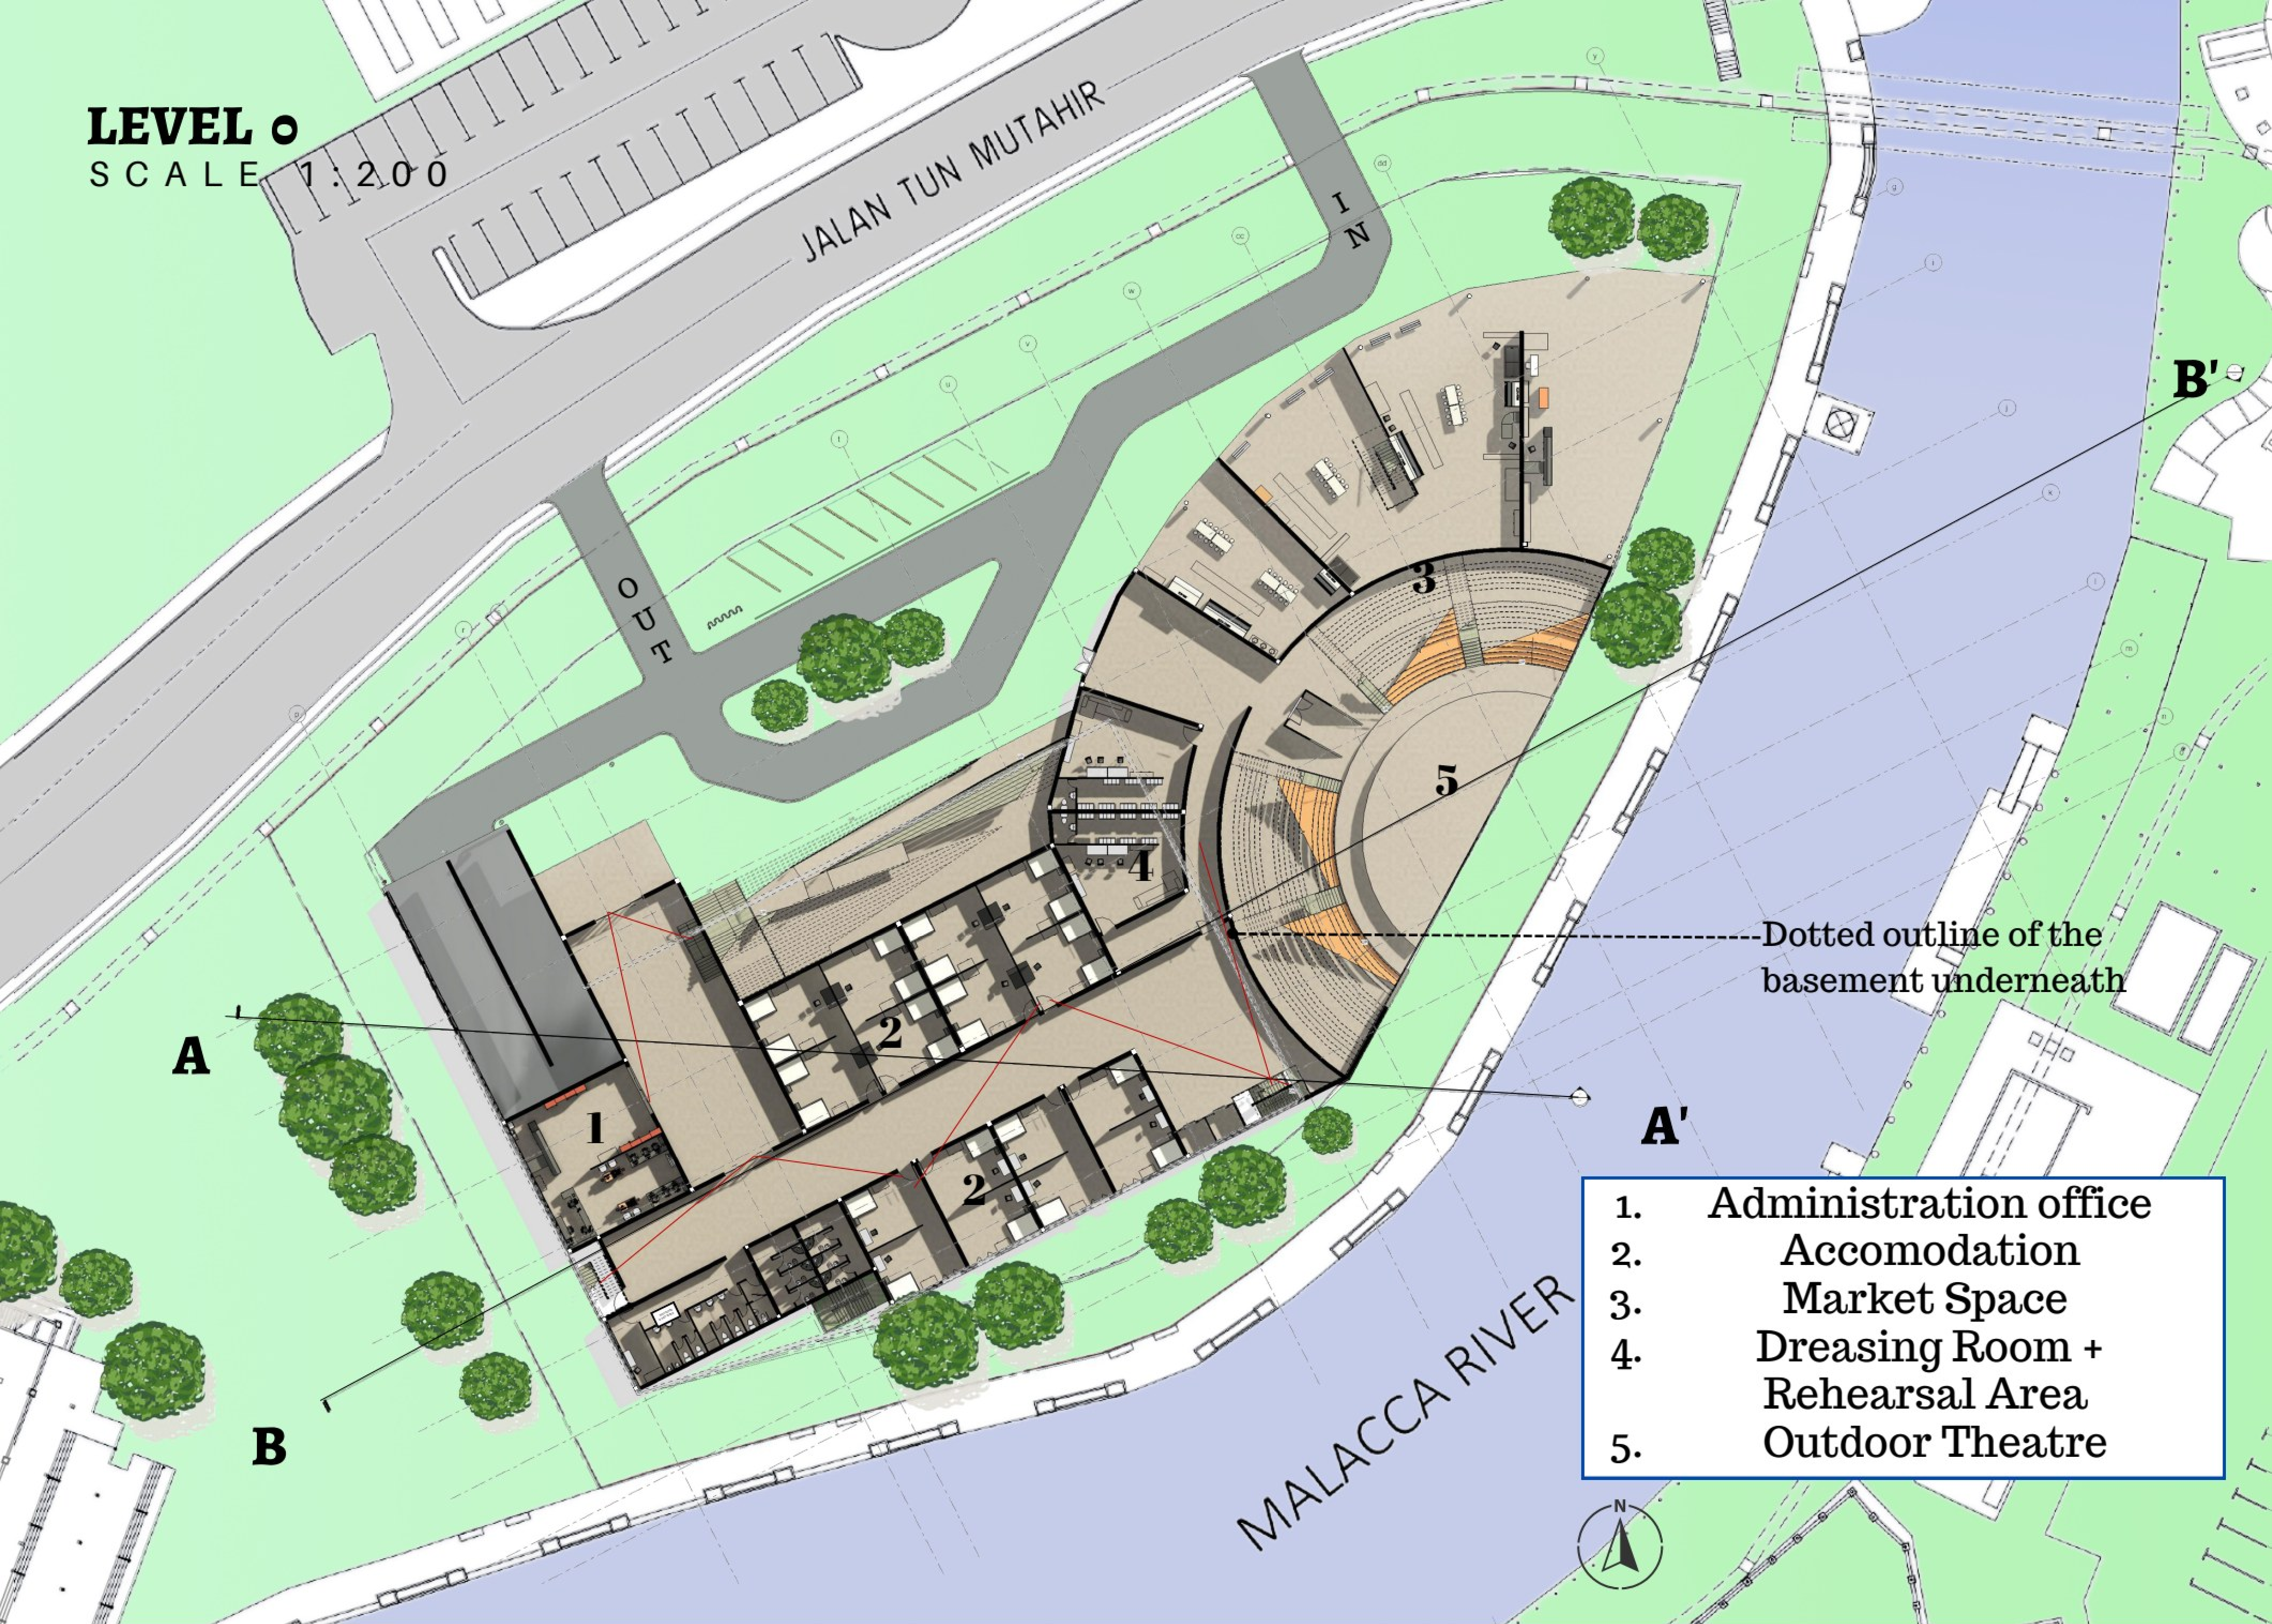

My design intention for this community center is to create a platform of opportunities, socialisation and entertainment. And my target users are the youth, local artists and vendors, tourists and small businesses owners. The ancillary program of my community centre is the **kuih** workshop. **Why kuih?** Kuih is a signature street food of Malacca. There are many different types of kuihs which were specifically originated in **Malacca** like some of nyonya kuih and Portuguese kuih etc .

One of the most popular form of kuih is layering different ingredients on top of each other like **Nyonya Kuih**, a significantly popular street food in Malacca. This kuih mostly comes in square shape, but the artistic concept of layering different components is a great inspiration behind the form of this **community center** which is specialized with the kuih making workshop. The initial form of the building is also layered in a rhythmic way to create a flow.
